

# House of Government

## *Industry:*

**Executive power of the Republic of Kazakhstan**

## *End User:*

**House of Government**

The 22-floor includes the Chancellery of Prime Minister, working offices of Prime Minister and his deputies, meeting halls and some working offices of Chancellery's staff.

## *Business Objection:*

To equip the building with the following systems: CCTV system, public address system, congress system with the possibility of simultaneous translation and visualization system in a hall for 800 places.

## *Solution:*

It was decided to install the CCTV system on the base of Divar as it gives the possibility of permanent recording.

The used cameras: Dinion and FlexiDome.

DCB conference systems were installed in order to establish the possibility of organizing meetings and governmental conferences.

## *Result:*

The Security of the House of Government points the advantages of the CCTV system which allow to:

- record and look over the records simultaneously and separately from all cameras;
- find quickly the necessary moment (using time or event);
- make an archive of recorded data.

The congress system recommended itself as a reliable equipment which saves its main features even in case of permanent use.

***Конгресс системы Bosch DCN NG congress systems are technical instrument in the working process of the Government of the Republic.***
