

House of Ministries

Industry:

Administrative building

End User:

The total area is 228 000 m², the length of the building is 1,5 km, consists of 20 blocks and is step-by-step formed with 8 – 10 floors. Except work offices and technical rooms there are also 5 conference halls, 6 cafeterias, archives, museum and polyclinic.

27 ministries with all their departments were decided to be located there.

Business Objection:

This object was equipped with public address system, CCTV system and conference system. The most difficult feature of this project was that audio and video signals should have been transferred to long distances.

Solution:

The CCTV system is based on Divar 2, about 1500 cameras are used here, street variants also. The Public address system is based on Presidio, about 10 000 loudspeakers are used, for saving the quality of sound we used fiber optic cable. 8 operator rooms were created for servicing of this building. Conference halls are equipped with DCN systems.
