

The Ministry of Transport and Communications of the Republic of Kazakhstan

Industry:

The Ministry of Transport and Communications is a central executive institution which implements management and intersectoral coordination in the sphere of transport and communications.

End User:

The administrative technological complex "Transport Tower"

- is a tower with well-developed first floor. The main façade is directed to esplanade for pedestrian traffic (north – south), the side is directed to the highway from airport to the center of the city, all this correspond to the multifunctional requirement of the business center of Astana city.

The building is multifunctional, complicated in construction, is full of modern technologies, the building has dynamic, memorable construction, this effect appears because of the cone-shaped steeple and the skew top floors.

Business Objective:

To equip the main halls for meetings with the conference systems with the possibility of simultaneous translation. The main term was to do the work in the shortest terms.

Solution:

DCN and Consentus conference systems were chosen because of their perfect combination of modern design and efficiency. AutoDome G3 cameras perform the function of video surveillance. The system of infra red translation of simultaneous translation is also used. The height of one room allowed to install the high-technology active Intellivox loudspeakers.

Result:

All meetings are held in halls equipped with the modern high-technology equipment. The participants can estimate the advantages of innovative technologies in the sphere of conference communication.
