

The Archive

Industry:

Archiving

End User:

THE NATIONAL ARCHIVE OF THE REPUBLIC OF KAZAKHSTAN

The object is used for processing the information in special laboratories and keeping the material values of the Republic of Kazakhstan. The total square of the building is about 120000 m². The Archive complex consists of 2 completely different connected buildings. The first building consists of 9 floors for archive rooms contained about 1 million items, the 10th floor is for technical rooms, the building is egg-formed. The building is round with the diameter of 13 m, has 40 m of height. The rooms of archive are: the storage of official documents, photodocuments and microfilms, book storage and rooms for the responsible people. The second building has 4 floors, inside the building there are cabinets of the administration, press-conference hall, showing room, exhibition hall and some technical rooms.

Business Objection:

To equip the hall with the conference system and the system of simultaneous translation to 2 languages.

Solution:

CCS 800 Ultro conference system was used for this hall.

Result:

This system completely suits the customer as the best combination of price-quality.

Installed by:

CSI-Kazakhstan Ltd.
