

“Grand Park “ Esil ” Hotel in Astana city

Industry:

Hotel industry

End User:

“Grand Park Esil” Hotel in Astana city is situated in historical building which was “Ishim” Hotel in the past. After the serious reconstruction the hotel changed its status. Now it’s a high class 4* hotel which offers a wide range of services.

Business Objection:

The purpose given by the owner of the hotel the “Ait Hotel” company was to equip the building with public address system, automatic fire alarm system and conference system with the possibility of simultaneous translation.

Solution:

DCN system was chosen for as conference system because it gives all advantages of innovative technologies in this sphere.

All rooms were equipped with the components of public address system such as loudspeakers and Plena system which is used as a part of fire alarm system and provides the voice message of alarm, sound control and translation of background music.

Bosch DCN system provides control of all types of conferences: small non-formal conferences and even very large international congresses with thousands of delegates.

Result:

Bosch CCS 800 conference system provides the possibility of control and holding all types of conferences: from small informal meetings to international congresses which are successfully held in the hotel’s conference hall.
